## Professional Summary

DevOps Engineer with 2 years of experience in CI/CD automation, cloud infrastructure, and containerization. Reduced deployment time by 60% and improved system reliability by 45% through Jenkins pipelines and AWS optimization. Expert in Docker, Terraform, Jenkins, AWS, and Infrastructure as Code practices.

## Technical Skills

|                            |                                                               |
|----------------------------|---------------------------------------------------------------|
| Cloud Platforms            | AWS                                                           |
| Containers & Orchestration | Docker, K8s                                                   |
| CI/CD & Automation         | Jenkins, GitLab CI/CD, GitHub Actions, Continuous Integration |
| Infrastructure as Code     | Terraform, Ansible, Configuration Management                  |
| Monitoring & Observability | Prometheus, Grafana, Loki, New Relic, Nagios                  |
| Programming & Scripting    | Python, Bash, Shell Scripting, Automation                     |
| Databases                  | MongoDB, MySQL, SQL, Database Migration                       |
| Version Control            | Git, GitHub, GitLab                                           |
| Security & DevSecOps       | Security Scanning, SonarQube, Access Control                  |
| Operating Systems          | Linux, Ubuntu, Unix, Server Administration                    |

## Work Experience

### DevOps Engineer - DJT Corporation Investments Pvt. Ltd, Noida July 2024 - Present

- Architected Jenkins CI/CD pipelines for 8+ applications with Docker containerization and AWS deployment, reducing deployment time by 60%
- Engineered auto-scaling infrastructure on AWS, improving system reliability by 45% and achieving 99.9% uptime
- Deployed Prometheus, Grafana, and Loki monitoring stack, reducing incident resolution time by 30%
- Automated HOB service deployment eliminating 70% manual effort through continuous integration
- Executed minimal-downtime database migration with automated rollback procedures, maintaining 99.9% uptime
- Implemented New Relic APM for database optimization, reducing query response time by 40%
- Built automated backup systems achieving 100% backup success rate
- Managed Deerika application - a hyperlocal e-commerce platform with complete CI/CD pipeline setup

### DevOps Intern - Reticen8 Technology, Gurgaon Jan 2024 - July 2024

- Provisioned Unix servers with automated patch management systems, reducing update time by 50%
- Built ISO images from source code and deployed on next-generation firewall hardware with restricted shell implementation
- Implemented Nagios monitoring for firewall systems, improving visibility by 80%
- Configured PKI-based authentication with secret key management for secure production access

## DevOps Projects

### Multi-Environment CI/CD Pipeline — Jenkins, Docker, AWS, SonarQube

- Designed end-to-end CI/CD pipeline with automated build, test, and deployment stages for microservices architecture
- Implemented multi-stage Docker builds reducing image size by 40% and deployment time by 50%
- Integrated automated testing and security scanning using SonarQube with deployment to dev, staging, and production environments

## Education

- 2020 - 2023 B.Tech in Computer Science and Engineering**  
Sanskar Educational Group of Engineering, Ghaziabad, UP
- 2017 - 2020 Diploma in Computer Engineering**  
Rajokari Institute of Technology, Delhi BTE

## Certifications

- Linux System Administration – Udemy
- Docker and Kubernetes – Technical Guftgu
